RESEARCH AND DEVELOPMENT ACTIVITY PROPOSAL

p200

Title: **RDE Agency In-House Review & Training**

Proponent & Implementing Department: Research and Development

Planned Date of Implementation: Batch 1 –January 11, 2023
AANR (Research & Development Category)

Planned Venue: PSU, Goa Campus (host venue)

Participants: VPREKM, RD Directors, RD Coordinators,
Facilitators & Presenters, Guests, invited ICTMO staff

Rationale

This review of approved ongoing and completed R&D projects/ studies is a mechanism to monitor the progress of the implementation of all approved R&D projects and disseminate/ validate results of completed researches conducted by the University. The proponents of the ongoing researches will present the implementation of their activities as presented in the Gannt chart and in their methodology's vis a vis their enumerated objectives and requested budget for utilization. Internal and external evaluators / reactors will be invited to give inputs, suggestions and affirms if the implementation is on its right track to sanitize and improve the quality of their research outputs and gain a higher potential for paper presentation in external fora and be published in relevant refereed/ ISI journals.

The presentations will be by category:
1) Agriculture/Fisheries Research, / Natural Resources

Best papers for completed researches will be determined by the evaluators based from the given criteria. Winners will be declared as Kilyab Awardees for the year.

Objectives

1. Evaluate completed and Ongoing projects/research regarding the attainment of objectives and adherence to the approved program of activities.
2. Identify problems met during the research/project implementation and recommend specific courses of activities such as: extension and recommendation of the evaluation panels.
3. Identify technologies generated requiring field-testing, verification and piloting.
4. Identify significant results/information for policy formulation development planning of the agency.
5. Identify publishable papers
6. Identify new researchable areas
7. Update agency RD plans and programs.
8. Identify technologies/results ready for packaging & dissemination and for adoption
9. Serve as venue for researchers to present technical papers.

Expected Outputs

- Specific courses of action for each project, i.e extension, expansion and dissemination.
- Summary of generated data and status of technology
- Technologies that require field testing, verification & piloting
- Data/Information & mature technologies for dissemination
- Publishable papers
- New Researchable areas
- Problems met and suggested solutions

MEMORANDUM

No. 001 s. 2023

TO : **VPREKM**
VPAA
CAMPUS / COLLEGE DEANS
FACULTY RESEARCHERS WITH COMPLETED RESEARCH FOR 2021-2022

FROM: **OFFICE OF THE UNIVERSITY PRESIDENT**

DATE : **JANUARY 3, 2023**

SUBJECT: **CALL FOR SUBMISSION OF PAPERS FOR AIHR UNDER AGRI-AQUATIC & NATURAL RESOURCES BOTH FOR RESEARCH AND DEVELOPMENT CATEGORY**

This is to announce to all faculty researchers with completed research for 2021-2022 to submit their entry for AIHR paper presentation **on or before January 7, 2023** at the **R&D Office** thru its **email add:** rnd@parsu.edu.ph.

The **AIHR** will be scheduled via **Zoom** on **January 11, 2023** at **9:00 AM**.

The AIHR will follow the guidelines and criteria of the regional symposium on RD&E highlights sponsored by BCAARRD since winning papers will automatically compete in the BCAARRD Symposium where ParSU is a member SUC.

For more information, please refer to the attached guidelines and categorization.

For your guidance and compliance.

RAUL G. BRADECINA, PhD.
SUC President III

GENERAL GUIDELINES

1. Entry papers are **completed researches for the year 2021-2022.**

2. Categorization between Research and Development programs/projects will follow the definition below:

   Research Category: The research result under this category is based on experimental or theoretical work undertaken primarily to acquire new knowledge directed primarily towards a specific aim or objective. It may, however, be subjected to further research and field verification.

   Development Category: Output of systematic work, drawing on existing knowledge gained from research and / or practical experience that is directed towards producing new materials, product or devices, installing new processes, systems and services and improving substantially those already produced or installed. This may also include output of pilot testing projects of innovative work that confirms and demonstrates the feasibility of actually using a technology, modality or approach, gauging end-user's reaction to introduction of improved technologies and identifying potential problems related to wider dissemination, utilization and adoption so that these can be fed back to researchers.

3. Entries should be properly **endorsed by the respective college / campus deans or the college or campus coordinators.**
4. The manuscript should be in the prescribed format: **e-copy/printed on 8.5" x 11" bond paper, single space, using Arial font size 12, and should not exceed fifteen (15) pages** including tables and figures. E-copy / printed should be submitted to the R&D office or thru its email add: rnd@parsu.edu.ph **on or before January 7, 2023.**

5. An e-copy of the powerpoint presentation of the competing papers should also be submitted.

6. Each presentation is limited to a **10-minute oral presentation** followed by a **5-minutes Question-and-Answer portion**. The allotted time shall be strictly observed.

7. Awards include certificate of recognition and cash prizes for both categories. **Third, Second and First Prize winners** will be declared in each category following the approved guidelines for Kilyab Awards.

EVALUATION CRITERIA FOR THE BEST R&D PAPER

The evaluation shall follow the criteria and distribution of points outlined below.

CRITERIA	Points	
I. MANUSCRIPT		
A. Research Category		
1. Significance of findings*		**60%**
▪ Contribution to new knowledge S&T advancement	(30%)	
▪ Relevance to national/regional development	(30%)	
2. Manuscript/Write-up		**30%**
Creativity, originality and quality of work		
▪ Rational/State of the art (to include Analysis of the problem)	(7%)	
▪ Objectives	(3%)	
▪ Conceptual/Analytical framework/ Methodology	(10%)	
▪ Accuracy of figures and language	(4%)	
▪ Clarity and style	(3%)	
▪ Cogency and logic (coherence)	(3%)	
B. Development Category		
1. Significance of findings*		**60%**
A. Social Acceptability (The social significance of the technology/intervention to target end-users)	(12%)	
B. Technical Feasibility (How well a technology/intervention is able to achieve what was designed to do)	(12%)	
C. Financial/Economic Viability (The financial/economic soundness of promoting the use of a particular technology/intervention)	(12%)	
D. Environmental Soundness (The ecological implication of introducing a recommended technology/intervention)	(12%)	
E. Political Acceptability (The political relevance of promoting the technology among the stakeholders, beneficiaries)	(12%)	
2. Manuscript/Write-up		**30%**
a. Creativity, originality and quality of work Rationale/State of the art (to include analysis of the problem	(7%)	
b. Objectives	(3%)	
c. Conceptual/Analytical framework/ Methodology	(10%)	
d. Accuracy of figures and language	(4%)	
e. Clarity and style of writing	(3%)	
f. Cogency and logic of discussion	(3%)	

IVERSITY VISION

eading university in geology, bio-resource science
nvironmental management in the Bicol Region.

IVERSITY MISSION

ovide quality instruction in the arts, philosophy,
ces, technology, and other relevant courses and
e a competitive advantage in research, extension,
roduction services for the socio-economic
ment of the Bicolanos.

IVERSITY CORE VALUES

ssion for excellence
rvice for client satisfaction
ty for Stability

UALITY POLICY

artido State University commits to provide quality
uction, responsive research and needs-based
sion services for global competitiveness and
faction of its clients, stakeholders, regulatory bodies,
ther service providers through continual
ovement of the quality management system.

RATIONALE

This Research and Development Agency In-house Review is a yearly activity sponsored by the R & D Councils that involves all faculty researchers of the different campuses and colleges of the university. The activity's primary purpose is to present the completed research during the particular year unde review. The researchers will present the highlights of their studies to oth researchers, invited guests, and experts representing various disciplines th will serve as evaluators.

The presentations will be by category:
1) Research category
2) Development category

Best papers will be determined by the evaluators based on the criteria given. Winners will be declared as Kilyab Awardees for the year.

OBJECTIVES

1. Evaluate completed research regarding the attainment of objectives and adherence to the approved program of activities.
2. Identify problems met during the research implementation and recommend specific courses of activities such as recommendations of the evaluation panels.
3. Identify technologies generated requiring field-testing, verification, and piloting.
4. Identify significant results/information for the policy formulation development planning of the agency.
5. Identify new researchable areas
6. Update agency Research and Development plans and programs.
7. Identify technologies/results ready for packaging & dissemination and for adoption
8. Serve as a venue for researchers to present technical papers.

RESEARCH CATEGORY

IN FOCUS

2023 UNIVERSITY RESEARCH AGENCY IN-HOUSE REVIEW

The Research and Development Division headed by Dir. Luisa M. Lanciso conducted its Research Agency In-House Review (AIHR) of Completed Research Projects under Agriculture, Aquatic and Natural Resources (AANR) this January 11, 2023, via Zoom. The main purpose of this activity is to assess and evaluate the completed projects/research of the College/Campus. This year's AIHR showcased 17 researches who have competed for the top 3 best paper winners: 10 for the Research Category and 7 for the Development Category.

Manuscripts were then delivered to evaluators from reputable institutions and agencies. The board of evaluators was experts from Bicol University (BU), the Department of Science and Technology-Philippine Council for Agriculture, Aquatic and Natural Resources Research and Development (DOST-PCAARRD), Department of Agriculture Regional Field Office V, and Davao Del Sur State College. For the Research Category, the evaluators were Dr. Plutomeo M. Nieves, BU Retired Professor/Researcher; Ms. Kristine Joy Lapitan-Tandang, Science Research Specialist II DOST-PCAARRD; and Dr. Lorenzo L. Alvina, Chief Integrated Laboratories Division-DA ROV. On the other hand, for Development Category, the evaluators were Dr. Arnulfo P. Malinis, Professor VI/Campus Dean of BU Polangui Campus; Dr. Ninfa R. Pelea, BU Retired Professor/Researcher; and Dr. Mark Jude F. Trondillo, Director of Research for Development & Innovation of DDSSC.

The University with its vision and mission consistently engages in significant research undertakings in the hope of discovering new knowledge, innovative technologies, and practices toward sustainably-developed communities.

The In-house Review also serves as a venue for recognizing the efforts of

Research Title: **PROXIMATE COMPOSITION AND MUSCLE PROTEIN PROFILE OF DRIED SALTED ABO (OTOLITHES RUBER)**

Presenter: Dr. Teresa Avila-Mendoza*, Dr. Myrna C. Bigueja, Dr. Raul G. Bradecina, Antonino B. Mendoza Jr., Katrina L. Canon, Satoshi Kubota

Campus/College: Lagonoy Campus/Sagnay Campus/OP

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
I. MANUSCRIPT				I was interested maybe the presentation siguro as a DA employee nakikita ko po dito is yun kasing practices sa drying nakadepende sa langit diba? Do you agree po? Kung maulan mataas ang concentration kung hindi maulan binababa nila yung salt concentration. So siguro yung manufactures nya po ang isa ding pwedeng tignan nyo and tinitignan ko yung relationship nung salt and time yun yung sa aspect ng processing pero yung aspect ng gano ba sya katagal pwedeng iistore wala pang ano and yung protein content ano ba yung ideal version ng abo na ano ba dapat ang protein content nya ano ba ang standard or is there a standard pa or if there is none then dun tayo sa standardization kung ano dapat ang characteristics ng abo. Ano ba yung sinasabi ni sir plutz na nutrition content ano ba yung texture nya yung ganong mga factors and including also yung protein contents na naano nyo. Lastly, establish your standards and yung food safety nya.
Significance of findings

Presenter: Liezel DC. Atole Campus/College: CAS

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
I. MANUSCRIPT **Significance of findings** • Contribution to new knowledge S&T advancement • Relevance to national/regional development	30% 30%	**60%**	**55**	I was impressed by the study my suggestion would be siguro yung commercial application like the development of a certain products na pwede mong ibenta sa farmer na kailangan naten which is already available in some industries like sa crop production so again yung practical usability ang hinahanap ko usually. Otherwise baka ilalagay lang to sa library so yun yung potential ng commercial application nya otherwise talagang magagamit natin yung findings.
2. Presenter: Francis Ignatius L. Nieva Campus/College: CAS

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
I. MANUSCRIPT **Significance of findings** • Contribution to new knowledge S&T advancement • Relevance to national/regional development	30% 30%	**60%**	**47**	Some of your recommendations defy common sense yung mas gusto nilang bilhin yung sprayer kesa hand tractor di ba malamang naman common sense naman kasi mas mura yung sprayer and di mo naman kailangan bumili ng hand tractor everytime magtatanim ka eh these are fixed assets nung farm household so I mean you should have tested your findings to ground kung ganun ba talaga kasi yung ang findings nung tool mo diba? Pero yung actual na scenario dapat kasi we're seeking the truth so what is the truth. Last point, if you're telling us the 2019 data then people will be using your data baka iba na ang figure ngayon kasi 2019 on set palang ng pandemic yon so things have changed people have parang as statistics are saying we have the lowest employment rate right now pero again if you look at Camsur we are among the top 10 poorest province so there will be other factors.

I. **MANUSCRIPT**				Actually I was looking for yung analysis ng feeds na ginamit nyo kasi baka yung gamit nyong feeds eh whatever claim na sinasabi mo na nakukuha doon sa wth ah ipomea batatas na extracts eh nacocover up lang nung available nutrient doon sa commercial feed and kung gusto mong malaman yung details or nung feed chemical analysis nandun yun sa product. Second point what specific chemical compound enzyme whatever hormone kasi ang ipomea batatas malamang mataas ang may mga hormones na mataas dyan usually oxine yung hormones sa mga shoots so anong effect nung hormones na yung nakakapagpataas ng immune system nya.

I. MANUSCRIPT **1. Significance of findings** • Contribution to new knowledge S&T advancement • Relevance to national/regional development	30% 30%	**60%**	**57**	If you look at the bamboo industry sa Philippines parang malayo pa tayo sa pwedeng potential nya. One of the major reasons if you look at the parang secondary resources ang bamboo kasi remains to be a poor man's wood kasi hindi sya napepreserve ng matagal so madali syang magdeteriorate in 5-10 years. Siguro while we are studying yung diversity it would also be worthwhile to know na yung industry situation nya mas maganda sigurong pag aralan kasi may programa ang DA sa bamboo and yet we don't know what to do pa. In terms of funding baka makakita tayo ng research na applicable for bamboo industry use. If you see sa atin yung bamboo maganda yung tensile strength nya mas matibay sya sa bakal and mas matigas sya sa konkreto so maraming uses pero hindi sya napepreserve so yung preservation talaga ang crucial sa bamboo.

Presenter: Dr. Michael C. Clores*, Diana Rose R. Pesimo, Raul B. Burce

Campus/College: Caramoan Campus

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
I. **MANUSCRIPT** 1. **Significance of findings** • Contribution to new knowledge S&T advancement • Relevance to national/regional development	30% 30%	**60%**	**57**	I'll be looking into the practical applications of this findings kasi I've been involved in jeff founded by worldbank ah wala akong nakitang parang practices that community can adapt for seagrass kasi dun sa pinaplano for coastal resource management parang walang specific for seagrass so it will be a good avenue na madocument natin ano ba talaga yung best practices for seagrass management otherwise we can develop programs for this. Second point yung possible alleviation tool kasi ang minomonitor natin is yung change across time so since nakuha nyo na yung baseline ano ba yung parang future studies talaga na kailangan kasi climate change is over the horizon as well as yung sea level rise so what areas in bicol we will be having seagrass more or yung parang growth potential when we model kung ano talaga yung kailangan sa climate job in the future so iyan siguro ang pwede pang tignan.
2. **Manuscript/Write-up** Creativity, originality and quality of work • Rational/State of the art (to include Analysis of the problem) • Objectives • Conceptual/Analytical framework/Methodology • Accuracy of figures and language • Clarity and style • Cogency and logic (coherence)	7% 3% 10% 4% 3% 3%	**30%**	**27**

Research Title: **BREED IDENTIFICATION, SOURCES, AND MEAT CHARACTERISTICS OF RABBITS (ORYCTOLAGUS CUNICULUS L.) IN PARTIDO, CAMARINES SUR**

Presenter: Jenny P. Lorio*, Gina M. Villareal Campus/College: Salogon Campus

Criteria	Weight	Points	Rating	Comments/Suuestions/Recommendations
I. **MANUSCRIPT** **Significance of findings** • Contribution to new knowledge S&T advancement • Relevance to national/regional development	30% 30%	60%	50	I'm interested in this study because I'm from the DA and its very worthwhile to know that we have this different types of breeds. I would just like to ask the presentor again reemphasizing on what Dr. Plutz has said why were you interested in doing this breed and what is the purpose because what the sense of descriptive study is you're not keeping something. The second is you're describing an industry that still have a very hindi pa nga infant eh parang nagsisimula palang and you have so many problems presented and the recommendations are too general yun siguro ang gusto kong makita what's your specific recommendation for agency in order to widen the utilization of rabbit as a meat source of and lastly you know breeds are certified by bodies of people that are in to it right? So yung breed dapat may pedigree yun so kung nakacategorize sya as pure breed may pedigree certificate yon. Second point dun sa breed sya and sa meats parang kung scientific process ang dadaanan mo dapat di ba dumaan sya sa laboratory kung ano ba ang type nung meat nya tinesting nyo lamang o ano ba yung mga content ng protein nya and dun sa breeds kasi ang breeds specific sya dun sa kung anong part man so ang average width nya dapat ganito ah does the local available breed fits the standards so yun yung kasi breeds are standard eh so ang kabayong walang paa hindi kabayo yun parang ganon so kung maiksi ang tenga nung rabbit mo ngaya kung sa breed sinugat nyo lamang yon so yun yung interested ako kung ano ba yung difference kumbaga lumiit yung tenga so yun yung interested ako.

Research Title: **DEVELOPING A PAYMENT FOR ECOSYSTEM SERVICES SCHEME FOR WATERFALLS' CONSERVATION AND PROTECTION IN LAGONOY, CAMARINES SUR, PHILIPPINES: COST-BENEFIT AND WILLINGNESS TO PAY ANALYSES**

Presenter: Ariel N. Delfino, Emmanuel A. Onsay *, Kevin C. Baltar Campus/College: CBM

Criteria	Wei2ht	Points	Rating	Comments/Sueeestions/Recommendations
I. MANUSCRIPT				1.There are some issues that I'd like to raise specifically for the following items I'm particularly interested in theoretical framework which was not presented because it will show what information we'd like to find out and the different tools you're going to use and the importants of their findings. Basically you're trying to find out if at what price tourist are willing to pay for visiting the falls and the tools that you presented somehow lack the relationship on what you are trying to find out. So in short ginamit nyo na lahat ng tools yet yung findings nyo hindi stated, bakit gusto nyong hanapin yon and ano yung result na gusto nyong mangyari? 2.Yung pricing can be used as a tool either to restrict or to get income, if you set the price too high mas maganda yun sa environment kasi less ang tourist and if you put the price too low easy access then you'll have the problem with waste and everything. It's either you're protecting the waterfalls or its either you're desecrating it by providing dun sa pricing so be careful on what you are recommending to the local government. Otherwise the fund you will be getting will be used for maintaining the cleanliness and orderliness of the place so it's like a double edge sword so you should be careful on how you present your findings.

Research Title: **NONFARM EMPLOYMENT TOWARDS POVERTY ALLEVIATION AND AGRICULTURAL PRODUCTIVITY: THE CASE OF CANAMAN, CAMARINES SUR**

Presenter: Francis Ignatius L. Nieva Campus/College: CAS

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
I. MANUSCRIPT **1. Significance of findings** • Contribution to new knowledge S&T advancement • Relevance to national/regional development	30% 30%	**60%**	50	• With good situational analysis • Provide an updated information as input for policy development towards poverty reduction and agri-productivity in Canaman, C.S. • Base-data is 2019 CBMS
2. Manuscript/Write-up Creativity, originality, and quality of work • Rational/State of the art (to include Analysis of the problem) • Objectives • Conceptual/Analytical framework/Methodology • Accuracy of figures and language • Clarity and style • Cogency and logic (coherence)	7% 3% 10% 4% 3% 3%	**30%**	25	• Made use of 2019 CBMS datasets and analysis done using *Probit model* and *Tobit regression* • Finding was presented usually without articulation or insights about the realities at the farm or community level. • Results must be substantiated with information from similarly situated research works. • Conclusion & recommendation section is only a narration of the findings without objective conclusions
II. Oral/Online Presentation p. Clarity of presentation (visual) q. Voice modulation r. Visual-impact of presentation s. Compliance to time allocation t. Response to inquiries	2% 2% 2% 2% 2%	**10%**	8

Research Title: Developing a Payment for Ecosystem Scheme for Waterfalls' Conservation and Protection in Lagonoy, Camarines Sur, Philippines: Cost-Benefit and Willingness to Pay Analyses

Presenter: Ariel N. Delfino Campus/College: College of Business and Management

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
I. MANUSCRIPT				- Though gforms are accepted tools for survey especially during the pandemic period, special caution should be made on its use. It has a tendency to be selective and may not be reflective of the true endusers/target respondents. - Policy recommendations may still be enhanced based on the results of the study. - Is there significant difference on the asthetic and environmental value of the four waterfalls? - The four waterfalls may require different environmental fees depending on their asthetic value and environmental contribution. - The researchers may consider using substitution values to improve the valuation of the falls.

Research Title: Breed Identification, Sources, and Meat Characteristics of Rabbits (Oryctolagus cuniculus L.) in Partido, Camarines Sur

Presenter: Jenny P. Lorio Campus/College: Partido State University-Salogon Campus

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
I. MANUSCRIPT				- How high is high? The study made use of descriptive stat without reference values. - Since the study is an assessment of the rabbit stock in the District, the pie gragh may also be presented with the actual number of rabbits surveyed. The actual number would show how density of the actual stock present - Bread description and meat characteristics are general characteristic unless the study also considered documenting the feeding and culture habits. Otherwise, the meat is expected to be a general characteristic anywhere else. - I am looking forward to a more comprehensive study on the feasibility of rabbit raising in Partido or an Assessment of Potential of Rabbit Industry.

Research Title: Nonfarm Employment towards Poverty Alleviation and Agricultural Productivity: the case of Canaman, Camarines Sur

Presenter: Francis Ignatius L. Nieva Campus/College: CAS

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
I. MANUSCRIPT				- The researcher should be commended for maximizing the use of the CBMS data to pulse the community. - Needs to improve on the discussion of the results. - No significant difference between agricultural wage earner and not employed may be a signal to policy makers to look into the status of the underwaged agricultural workers. Their welfare should also be looked after. - The utilization of child labor should also looked into. The researcher may recommend alternative solutions to address this pressing social concern. - The researcher look into what government agencies like DA can offer to address the lack of income in agriculture and what Canamaan can avail. Ex. Farmers can shift to high value crop

Research Title: **CHEMICAL COMPOSITION, MINERAL CONTENTS AND NUTRITION FACT ANALYSIS OF FERMENTED "SIRUM SIRUM", LANTERN FISH (BENTHOSEMA PTEROTUM)**

Presenter: Glenda S. Sales* Dr. Myrna C. Bigueja Campus/College: Sagnay Campus

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				
A. Social Acceptability (The social significance of technology/intervention to target end-users)	12%			Provide information regarding the potential no. of end-users.
B. Technical Feasibility (How well a technology/intervention is able to achieve what was designed to do)	12%			If you are improving an existing technology in making fish sauce, what is the present problem of this process?
C. Financial/Economic Viability (The financial/economic soundness of promoting the use of a particular technology/intervention)	12%	**60%**	53%	Expound on the improvement that you would like to do with the existing process.
D. Environmental Soundness (The ecological implication of introducing a recommended technology/intervention)	12%			Provide information on the analysis of products for the existing process or any benchmark product as basis for a better product.
E. Political Acceptability (The political relevance of promoting the technology among stakeholders, beneficiaries)	12%			
Manuscript/Write-up				
a. Creativity, originality and quality of work	7%			The title could be aligned to the objectives about the Improvement of the Process in Making Fish Sauce and other by-products from "sirum-sirum"
Rational/State of the art (to include Analysis of the problem)	3%			
b. Objectives		**30%**	25%	
c. Conceptual/Analytical framework/Methodology	10%			
d. Accuracy of figures and language	4%			
e. Clarity and style of writing	3%			
f. Cogency and logic (coherence)	3%			
II. Oral/Online Presentation				Nice presentation.
a. Clarity of presentation (visual)	2%			
b. Voice modulation	2%	**10%**	8	Congratulations to the Researchers.
c. Visual-impact of presentation	2%			
d. Compliance to time allocation	2%			
e. Response to inquiries	2%			
TOTAL		**100%**	86%

Research Title: **SOCIO-ECONOMICS OF FISH PROCESSING IN PASACAO, CAMARINES SUR**

Presenter: Dr. Cristina P. Lim

Campus/College: Sagnay Campus

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				The research could be included under socio-economics category.
Social Acceptability (The social significance of technology/intervention to target end-users)	12%			Unregistered processor could also be looked into as this will add to the 19 registered for capability building on business operation/BCP.
B. Technical Feasibility (How well a technology/intervention is able to achieve what was designed to do)	12%			
C. Financial/Economic Viability (The financial/economic soundness of promoting the use of a particular technology/intervention)	12%	**60%**	53%	A continuing study on value chain for selected fish materials and products could be done.
D. Environmental Soundness (The ecological implication of introducing a recommended technology/intervention)	12%			Is the ranking/numbering of the recommendations based from the urgency of the action required? If not, prioritize.
E. Political Acceptability (The political relevance of promoting the technology among stakeholders, beneficiaries)	12%			
Manuscript/Write-up				A problem-solution matrix could be added to clearly present interventions for each problem.
a. Creativity, originality and quality of work	7%			
Rational/State of the art (to include Analysis of the problem)	3%			Results could be presented using graphs.
b. Objectives				
c. Conceptual/Analytical framework/Methodology	10%	**30%**	27	Recommendations are doable, prioritization required.
d. Accuracy of figures and language	4%			
e. Clarity and style of writing	3%			
f. Cogency and logic (coherence)	3%			
II. Oral/Online Presentation				Nice presentation.
a. Clarity of presentation (visual)	2%			
b. Voice modulation	2%	**10%**	9	Congratulations to Dr. Lim
c. Visual-impact of presentation	2%			
d. Compliance to time allocation	2%			
e. Response to inquiries	2%

Presenter: Love Joy P. Baleta*, Patricia M. Candelaria, Francis N. Baleta, Diomerl Edward N. Baldo

Campus/College: CBM/Sagnay Campus/Caramoan Campus

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				
A. Social Acceptability (The social significance of technology/intervention to target end-users)	12%			Discuss more on the active properties in sweet potato red shoots or SPRS as immunostimulants?
B. Technical Feasibility (How well a technology/intervention is able to achieve what was designed to do)	12%			The process of producing the SPRS powder and other materials as ingredients together with the best feed formulation as feeds for tilapia could be applied for IP protection either as invention.
C. Financial/Economic Viability (The financial/economic soundness of promoting the use of a particular technology/intervention)	12%	**60%**	56%	
D. Environmental Soundness (The ecological implication of introducing a recommended technology/intervention)	12%			The use of matured shoots or the entire SPRS could be studied instead of young leaves only for sustained supply of raw materials.
E. Political Acceptability (The political relevance of promoting the technology among stakeholders, beneficiaries)	12%			Feasibility in the powder production and other forms could be studied further to include feed formulation i.e. 90 g from control vs 80 g in the new formulation.
2. Manuscript/Write-up				
a. Creativity, originality and quality of work	7%			Weight gain in tilapia could be further explained as this would be the most important data vis a vis the cost.
Rational/State of the art (to include Analysis of the problem)	3%			
b. Objectives				
c. Conceptual/Analytical framework/Methodology	10%	**30%**	28%	Recommendation on the test of the technology for a wider cage space.
d. Accuracy of figures and language	4%			
e. Clarity and style of writing	3%			
f. Cogency and logic (coherence)	3%			
II. Oral/Online Presentation				
a. Clarity of presentation (visual)	2%			Nice presentation.

Research Title: **CHEMICAL COMPOSITION, MINERAL CONTENTS AND NUTRITION FACT ANALYSIS OF FERMENTED "SIRUM SIRUM", LANTERN FISH (BENTHOSEMA PTEROTUM)**

Presenter: Glenda S. Sales* Dr. Myrna C. Bigueja Campus/College: Sagnay Campus

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				My concern was siguro we could either the objectives or the title will be my suggestion strongly recommend na medyo ijive or isunod natin yung both the fermentation between brine and marinated and the fermentation at different temperature. I would just like to add nalang regarding dun sa process I think the proximate analysis is correct baka lang po talaga sa mineral lang talaga to and with that I also notice that in the discussion there was a mention of mineral elements that was presented but when we look at the presentation particularly on that table 2 onward there are I think that you have mention calcium potassium it was there zero so meaning the presentation itself that the facts that was presented medyo hindi sya nag jive so yun lang po mam pakireview so that it will be presented later on a factual basis. And then the next one kasi nakalagay sya parang the presentation of yours is presenting that alternative for fish protein and carbohydrate as strongly stated in your results and discussions pakidouble check nalang din po mam because there was a presentation of parang infants and adults in foodtech or in food nutrition these two have different requirements lalo na po dun sa fish protein and carbohydrates so pakirecheck nalang po.

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				Regarding po dun sa first observation ko is that you identify directly the problems and then the policy recommendations based on the objectives that you presented. I want to know if yung assessment of the fresh fish handling practices methods and marketing during the discussion on your computation of course and estimates kasi more on a transport marketing, is there any significant process that you want to share regarding po dun sa handling and practices kasi sa results and discussion po mam parang transport lang po sya from port to the house so what is really the handling practices that you want to impart with this study? I would like to be clarified regarding this one, you have mentioned in page 5 regarding the business are our operators, fish processors are registered business owners? Our data here in socio demographic and economical characteristics in table 1 I would suggest na let's go back on the data baka meron lang nakaligtaan because some of my descrepancy kasi on very small na hindi napresent in that case balikan po natin lalo na yung sa let say for example educational attainment.
A. Social Acceptability (The social significance of technology/intervention to target end-users)	12%	**60%**	**49**

1. Significance of findings				From top to bottom it answers the objectives of course also from the presentation itself. Actually nasabi na yung question ko sana, is there a paper related to Francis? And you have already mention that there 4 published paper considering this type so may I know now nalang kung ito ba ay isang project 1, project 2 is a program may project ba to? My main concern was that when I found out that there is already a published paper similar to yours na prinisent ngayon when I look at the data ah there are similar data that is why I am asking kung different lang ba yung composition non at nito kasi if there are different composition or types when I read that article and yours presented now yung materials kasi atsaka composition are most likely the same. I will cite particularly on the table that you use in the feeding particularly table 4.

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				Regarding the paper I would like to commend the idea on helping the entrepreneurs on the ibos na if we want to publish this aside from the patent application we have to improve yung pagkasulat regarding from abstract to the rationale especially those na meron tayong factual na nilagay don internationally known na facts na ginamit natin we should put proper citation. Yung ano ko lang objectives my another suggestion that you do the functionalities on a scientific experimentation. Let's say for example na easier or madali or faster so in what sense that we can say that it is easier kasi maraming aspect po yun on strength. The next one on the methodology I would like to suggest kasi kung napatent na to for sure meron tong specification on your paper now presented there's no specification kasi yung ibig sabihin you the face of that molder gano kalaki, gano kahaba yung ibos maker mo so yun yung very basic na engineering aspect nya I would like to incorporate sa paper nyo po.

Research Title: **DESIGNING AND DEVELOPMENT OF FISH VENDOR COOLER**

Presenter: Jose S. Fernandez*, Alvin O. Primavera, Leoben C. Formalejo, Dr.Gemmah T. Barcillano

Campus/College: CET

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				Yung sa abstract po I think we need to improve then focus on the highlights kasi medyo mahaba. Sa rationale I would like to suggest na ano ba yung comparison naten or basis of this design aside sa namention kanina kasi if may problema lang is yung pagkakulong or paglagay or merong lagayan yung fish on the basis ano kasi yung gap na iaddress natin yung sanitation ba? Yung suggestion ko sana is to include the characteristics and testing of the cooler in terms of kung ano yung gusto nyong gawin so ibig sabihin testing and evaluation not only on the capacity kasi hindi natin nakita yung capacity you did not mention also in the methodology kung anong klaseng isda but you mention kahit anong klaseng isda but nevertheless yung capacity nya nung ice cooler nyo at yung capacity din ng lalagyan yung chamber. The other one you confirm now na kailangan nyo ng contamination so with that you have to do some testing on microbial test sa gilid, sa ilalim, yung tumutulo, yung ice mismo baka yun yung confirmation yung opening and etc. so another contaminants so pwede natin yung ilagay sa objectives.
A. Social Acceptability (The social significance of technology/intervention to target end-users)	12%	60%	41

1. Significance of findings				I would like to suggest that if ever there are findings because it was already mentioned na parang the sanitation is one of the problem then there will be a cause of illness something kung if in case manual ang gagamitin if we can put/add a data on that so its very helpful if we can do that and then if there are cases let say for example nagkaroon na ng reklamo or problema sa product in that barangay so it will be a big help. Yung sa objectives kase yung sa design ng utility model nyo I think we need to know the capacity of the design specification kahit na pwede yung chamber or yung mismong lutuan nya pabago bago but still we need to have that capacity so pwede natin mafix yon that's one part of the objectives na pwede natin ilagay. The other one as mentioned in the rationale and then wala sya sa results and discussions you always mention of the sanitation na microbial something so there was no microbial testing. It's very important to us lalo na tayo gumagawa tayo ng design on food related yung contamination at yung microbial testing is very important in the design. It should be a food grade material.

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				I would like to suggest that you review and edit nalang yung iba kasi I notice doon sa pasteurization temperature is indicated to be 1000° centigrade eh I don't think that is right. Anyway po pag pasteurization temperature it should be around 80 or below the boiling point which is 100° centigrade pakireview nalang. So I agree with claims some consistency between the objectives and the methodology and the results that you presented so pakireview nalang ah ano talaga yung gusto nyong ipresent ng objective ng research na to and ano yung ginawa nyo actually and then ano yung naging resulta ng ginawa nyo and then analyze the results nalang po para merong congruence between the title and all the parts of the paper. I don't know about the methodology na ginamit nyo kasi it looks very hightech sounds very hightech but meron kasing mga methods of standard analysis for proximate composition so for example for crude protein then you have the kildal you have the crude fat which is the lipid content it should be the soxhlet pakireview nalang.

Research Title: **SOCIO-ECONOMICS OF FISH PROCESSING IN PASACAO, CAMARINES SUR**

Presenter: Dr. Cristina P. Lim

Campus/College: Sagnay Campus

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				I suggest that you make several papers from this big paper you have many data for example you can focus on the socioeconomics aspect and then you can do technology assessment format where I would suggest for example that you can use the haccp platform to determine the aspects of the technology kasi since this is a DOST project that this are inputs to the possible technology assistance that the DOST could give to the fishing community in particular the fish processing technology. And then you can also do the gender analysis of this whole processing sector in pasacao. So one thing that I notice in your results is that pasacao continues to process fish despite the fact that they import the fish that they process most of them as you mention in the paper so I think this is because they have already the knowledge but the problem is that they now have a short supply of the raw material so the technologies there of smoking and frying okay parin I think the business aspect of this if they continue to produce the fish but the problem came with the decreasing supply so which is an indicator of the deteriorating state of the fisher resource. So maybe one recommendation to coastal resource management in the area so that they can revive or maybe they can engage in mariculture para meron silang supply kung wala na doong fish from the supply.

1. Significance of findings				Do you have an explanation on why the result is such? What's in the hot water treatment? Do you have an idea? So it could have the color of the kamote or the variety of the camote could have an effect kasi ano yung insights nyo? Ah tanong ko muna pare pareho ba yung kamote na ginamit nyo? Lahat sya pula? Green? I understand from our previous ano sa kamote depende sa variety ng kamote yung kanyang composition including the minor components which are important in the other aspects of feeding like stimulation you mention your paper naiistimulate yung feeding and then that's one idea that there's something in kamote which stimulate feeding or the efficiency or converting the feed into the mass ganon. So yun ang pwedeng matutukan which could be the masters thesis for example. So do you have an idea in your review of literature sa human studies for example kung ano yung effect ng kamote aside from satiating our hunger? Meron ba?

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				I'm very happy kasi meron ng machine na nadevelop meron ng ibos wrapper but may I suggest that you include also sa pag assess ng inyong equipment o machine yung quality criteria sa wrap. Ano pa yung mga indicator basehan ng good quality na ibos wrap na ano naten para yun na ang magiging basis ng ating pag evaluate ng machine nyo sa mga basis. So tanungin nyo dun sa gumagawa ng ibos wrap ano ba yung maganda? Ano ang basis kung irereject nila yung wrap and can we also have an insight on the maturity of the leaf ng requirements so is that a limitation of your machine kung pwede ba yon sa ano ba yon we can also include that and also include the performance of the wrap. Ano ba yung performance nya pag niluto na o ginamit na sa pagluto.

Research Title: **DEVELOPMENT AND FABRICATION OF 3 IN 1 KNAPSACK AGRICULTURAL SPRAYER**

Presenter: Jose S. Fernandez*, Leoben C. Formalejo Campus/College: CET

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				
A. Social Acceptability (The social significance of technology/intervention to target end-users)	12%	60%	53	Please define maybe in your introduction what you mean by 3 in 1 ano yung tatlo ano yung isa and then I understand sa paper that its pwedeng battery pwedeng ano more concise definition. We have to phrase it more concisely in the paper para initially naiintindihan ng reader that ito ang ibig sabihin po ng 3 in 1. That would emanate from maybe the description of engineering concept of the development of this knapsack sprayer so that would include also what problems are to be solved so initially meron tayong statement of the problem, ano ang problema sa present design ng knapsack sprayer and ano yung underlying engineering principles na isosolve which you are proposing to this said projects and kasama na don of course will be the identification yung mga objective measures kung ano yung sinusukat natin doon. I understand from the paper na ang gusto nyong isolve yung source ng energy so you can ship from maual energy para sa pumping process so you are giving options doon sa battery manual and electric na nakukuha sa battery but yung electric energy which would drive the pump manggagaling sa manual na tao mismo doon sa isa sa stored energy from AC current and ang isa naman ay galing sa solar energy.

Research Title: **DESIGNING AND DEVELOPMENT OF FISH VENDOR COOLER**

Presenter: Jose S. Fernandez*, Alvin O. Primavera, Leoben C. Formalejo, Dr.Gemmah T. Barcillano

Campus/College: CET

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				Ang client/pagbibilhan ba limited lang sa fish vendor? Wala bang ibang maidentify na ibang users like pwede ba ito sa bahay? But if you say 15,000 ngayon yung cost kaya ba yon ng fisherfolks or fish vendors? Kaya that will point to the question ano ang papalitan nito aside yung nakadisplay lang sa open? Diba ang ginagamit ngayon ng mga fisherfolk yung styrofoam kung gusto magstore lalagyan mo yung styrofoam boxes ng yelo at dun mo ilalagay yung isda para macool. Kaso basically yung ano dito is you would like to maintain the freshness of the fish para hindi sya for food safety purposes and sa food safety atsaka standards ng fish handling the target temperature is 4° centigrade eh nakita ko sa data parang hindi makakacomply sa standards na dapat the fish should be kept atleast 4° centigrade kung gustong iistore so that would lead us to ipepresent natin ano ba yung engineering and technology concept behind your design? Sa design ng box cabinet bakit double chamber may inner chamber kung saan mo ilalagay yung isda para malamig sya and then sa surrounding the chamber is an enclosure yung paglalagyan ng sodust and yelo and asin so ang critical dito is the proportion of the asin to the ice because the objective of adding the asin to ice is to reduce the melting point of ice.

Research Title: **3 IN 1 PUTO MAKING MACHINE**

Presenter: Jose S. Fernandez*, Alvin O. Primavera, Leoben C. Formalejo, Dr.Gemmah T. Barcillano

Campus/College: Sagnay Campus

Criteria	Weight	Points	Rating	Comments/Suggestions/Recommendations
1. Significance of findings				So ano yung capacity ng ginawa nyo how many puto can it produce in an hour or magkano ang volume ng per batch? So if I buy this machine I can produce 90 pieces of puto per hour? So yung design nyo wala pa kayong standard size or capacity? Ibig sabihin pwede nyong iano depende sa requirement ng user ganun ba yon? So pwedeng icustomize yung 3 in 1 puto making machine? Kasi that would have an effect on the cost kasi at the end of the day pero ano talaga yung pinakaconcept nyo customize or at this stage of the research isa ba yon sa nakuha nyong recommendations kasi kung halimbawa initially yung pag design nyo nito pag conceptualize meron tayong basehan. Di ba you conducted a survey of puto makers and ano yung pinakamalaking capacity ng puto makers sa target area or dun sa pinag surveyhan nyo ano yung lowest ano yung average ano ba yung tinarget mo?
