Project Title: Birth Defect Screening towards Its Prevention and Treatment:

A Case of Camarines Sur and Albay Province, Bicol Region Philippines

Project Director: Jun Jing, Ph.D. Research Center for Public Health, Tsinghua University

Local Project Leader: Francia Cruz- Lisay, RN, MPH Partido State University

Studies:

1. Epidemiological Survey of Birth Defects
2. Policies and Regulations Affecting the Birth Defect Prevention and Treatment Overall Assessment of Competence of Grass-Roots Medical and Health Institutions in Implementing the Birth Defect Prevention and Treatment
3. Birth Defect Service Offered by Gross-Roots Medical and Health Institutions
4. Gross-Roots Professionals in Mastering the Knowledge and Skills of Birth Defect Prevention and Treatment

A. Rationale:

With the increasing trend of birth defect, it becomes a global problem that has an impact mostly to emerging and developing countries. The data shows that 7.9 million babies in the world are born with severe defects each year, which accounts for 6% of the total newly-born population. For these children with birth defects, at least 3.3 million die before five years old and 3.2 million are growing up to become the disabled. Nearly above 90% children with birth defect and 95% death cases of children with birth defect appear in developing countries. Some Asian developing countries and regions such as Laos, Cambodia, Myanmar and Bangladesh are still suffering low economic development level and backward basic medical conditions. A child born with a defect would mean great misfortune and heavy mental and economic burdens for the family in these countries and regions, which also drags down the social development. However in the Philippines, there is limited data on birth defects.

In Asia, the Chinese government is one of the countries that have invested and attached great importance to the prevention and treatment of birth defects, adhered to the comprehensive birth defect prevention and treatment strategy, and promoted the tertiary prevention measures targeting birth defects to a great extent. All their efforts have gained significant achievements and helped accumulate rich experience in medical facilities. In collaboration with Tsinghua University,

an academic institution with a high sense of social responsibility the Partido State University aspires to work with them in take advantage of Chinese experiences and international practices, they desire to provide Asian developing countries with strategic support, technical support, academic support, and trainings in monitoring and preventing birth defects, so as to facilitate the development of health for women and children all over the world. At the end of the study, it hope to take this opportunity to drive the diversified and multi-level health cooperation modes among Asian countries, strengthen communication and deepen understanding among countries in terms of health services, and improve the level of health in Asia.

B. Objectives:

1. Identify the types of disease frequently occurred birth defects, disease status and provincial distribution In Camarines Sur and Albay.

2. Determine the policies, regulations and systems about the prevention of birth defects in the Philippines.

3. Assess the current situation and affecting factors of the birth defect work in Camarines Sur and Albay, mainly including: overview of the birth defect prevention and treatment work in the two provinces : Camarines Sur and Albay, the condition and capability of all-level medical and health institutions and their professionals in carrying out the prevention and treatment of birth defects.

C. Expected Outputs:

1. Profile and trend of birth defect in Camarines Sur and Albay.

2. Campaign material and activities for treatment and prevention of birth defect.

3. Identify health facilities to improve services to birth defect in terms of inadequacy of medical equipment particularly in Rural Health Unit and Hospitals

D. Methodology

The project will be conducted in Camarines Sur and Albay since among the six provinces of Bicol these two has the largest population and where the regional medical centers and mostly of the private ob-gyne are located. The respondents of the studies are the administrators and staff of the department of health, the medical institutions such as public hospital, private hospital and

ob-gyne clinic. The project will utilize questionnaires, status, and field survey. It will also conduct a face to face interview with key informant of the department of health and medical institution. It will also conduct a face to face interview with key informant of the department of health and medical institution. Furthermore. to strengthen the project it will use different literatures on birth defect.

The project will utilize descriptive-quantitative research method since it will not prove any theory but will explain existing phenomenon about birth defect and how it will be treated and prevented in the two provinces of Bicol region. In gathering the data, it will start from identifying the population of the respondents and it will set criteria to come up with sample size of each study. The research instruments that will be utilized in this project are mostly questionnaire and some with open-ended questions.

E. DETAIL WORKPLAN

Research Activities	2019							2020				
	Jun	Jul	Aug	Sep	Oct	Nov	Dec	Jan	Feb	Mar	Apr	M
1. Proposal Preparation												
2. Proposal Review												
3. Revision and approval of Proposal												
4. Training of enumerators												
5. Identifying the total population of respondent of the study

6. Sampling of respondent												
7. Data gathering- Survey and interview of farmer's community's beneficiary.												
8. Writing of findings and discussion												
9. Validation of research data												
10.Develop report for Tsinghua University												
11. Finish writing a research manuscript												
12. Submission of terminal report. Presentation to local, national and International forum.												
13. Article Publication

Agreement among Research Center for Public Health, Tsinghua University and Francia Cruz- Lisay on Launching the Birth Defect Investigation Program inthe Philippines

I. Two Parties

Party A:Research Center for Public Health, Tsinghua University — Program Leader: Professor Jing Jun

Address:B403, School of Medicine, Tsinghua University, Haidian District, Beijing, China — Postal code: 100084

Party B:Francia Cruz- Lisay
Partido State University

Address:San Juan Evangelista Street, Goa, Camarines Sur, Philippines — Postal code: NA

II. Background: the two parties have reached a strategic agreement on the basis of Party A's concern on the birth defect problem in Asian developing countriesand Party B's study and understanding of birth defects in the targeted country.

III. Division of Work

Party A shall:

(I) Work out a research plan for the whole program.

(II) Formulate a guide to the baseline survey.

(III) Draw up and implement a guide to the "Knowledge, Attitude and

Practice"survey.

(IV) Provide personnel trainings related to the baseline survey, the knowledge, attitude and relevant ethical issues etc.

(V) Provide necessary financial support for the research of Party B. The financial support is intent to cover the expenses of the birth defect investigation program. The program starts on July 1, 2019 and ends on December 31, 2019. The financial support will be 5000.00 USD before tax.

Party B shall:

(I) Set up a team to carryout the baseline survey and the knowledge, attitudeand practice survey, complete relevant interviews, questionnaires, data collectionand workourreport, etc.

IV. Intellectual Property Rights

The intellectual property rights of works generated in the investigation programshall be shared by the two parties in accordance with the Copyright Law of the People's Republic of China and relevant regulations ofthe Philippines.

V. Miscellaneous

This Agreement is effective between July 1, 2019 and December 31, 2019.

Issues not covered herein shall be settled through amicable negotiation among the two parties. In case that the dispute cannot be resolved through negotiation, each party has the right to initiate arbitration.
