MEMORANDUM OF AGREEMENT

ECONOMIC VALUATION OF PROTECTING ATULAYAN MPA USING FISHERMEN'S WILLINGNESS TO WORK RESERACH PROJECT

KNOW ALL MEN BY THESE PRESENTS:

This Memorandum of Agreement is made and entered into this 22 day of August, 2018 at the Partido State University, Goa, Camarines Sur, among:

The **KOCHI UNIVERSITY**, a national university cooperation with official address at 2-5-1 Akebono-cho, Kochi 780-8520, JAPAN, represented herein by **Dr. Teruyuki Shinbo**, A Professor of Kuroshio Science Unit, hereinafter referred to as **THE KU**;

-and-

The **PARTIDO STATE UNIVERSITY**, a public tertiary academic institution created under Republic Act 9029 with principal address at Brgy. San Juan Bautista, Goa, Camarines Sur, represented herein by **Dr. Raul G. Bradecina**, hereinafter referred to as **THE PSU**;

WITNESSETH THAT:

WHEREAS, the Kochi University\, is a comprehensive university offering education and research under the slogan from Regionality to Globality and from Globality to Regionality;

WHEREAS, based on a philosophy of local, relevant decision-making and regional community collaboration, they aim to help develop a safe, sustainable society where people live in harmony with the environment;

WHEREAS, they strengthen their principles of comprehensive education through regional collaboration;

WHEREAS, Partido State University is mandated to provide advanced instruction and training in the arts, philosophy, sciences, technology and other graduates and professional courses;

WHEREAS, it shall also undertake advanced studies, research, production and extension services and shall provide leadership in the area;

WHEREAS, studies on marine protected areas jointly conducted by scientists and experts from PSU and KU will generate more knowledge for their understanding by society;

WHEREAS, proper economic valuation of environmental services is needed in order to inform policy for the better management and conservation of coastal resources;

WHEREAS, the KU and PSU agree to conduct a study on the valuation of environmental services of MPAs from a fisherman willingness to work for its protection;

WHEREAS, deeper understanding of marine protected areas will promote cooperation and participation by stakeholders on the efforts to protect and conserve coastal ecosystem and resources;

WHEREAS, the coastal areas of Sagñay and the island of Atulayan have been the site chosen by PSU as the pilot area for its many coastal resource management and fisheries oriented researches and extension activities in the last 15 years;

WHEREAS, the importance information generated from this research will provide new knowledge that will be relevant for the understanding of MPA social science and the effective management of MPAs in Sagñay through science-based informed decision making process;

NOW THEREFORE, in consideration of the foregoing premises, and of the mutual commitment herein set forth, the parties hereto agree as follows:

Section 1. Economic Valuation of Protecting Atulayan MPA Using Fishermen's Willingness to Work Project

This project shall be known as Economic Valuation of Protecting Atulayan MPA Using Fishermen's Willingness to Work (refer to Annex A for the approved research proposal). It shall be jointly supported and implemented by the KU and the PSU.

Section 2. Responsibilities of the Project Partners

The **KU** shall:

- Provide and disburse funding for the project implementation, following the approved research proposal;
- Mobilize/designate an in-house counterpart who shall oversee the entire coordination and work closely with the PSU for the duration of the project;
- Make available all relevant data as may be required by the project partner;
- Organize meetings to discuss updates and accomplishments, concerns and gain feedbacks.

The **PSU** shall:

- Provide and disburse funding for the project implementation, in accordance with accounting and auditing rules of Philippine government;
- Mobilize/designate an in-house focal person who shall lead the PSU project team in accomplishing the targets;
- Organize/mobilize a team that will exclusively work on the project;
- Ensure that the project team are well aware of their deployment areas and are equipped with the necessary research protocol;
- Train/orient the enumerators who will be deployed to various locations in Sagñay;
- Undertake any and all activities necessary to complete the project requirements;
- In coordination with the KU, supervise and conduct all project-related activities;
- Share the final output to the KU, and to other agencies upon completion;
- Provide a terminal report for the project.

MISCELLANEOUS PROVISIONS:

Intellectual property rights. All data gathered in the course of and as a result of the implementation of the project such as, but not limited to reports, articles, research papers, data bank, tri-media presentations including project outputs, discoveries, inventions as well as the income derived there from, shall be subjected to the KU and PSU IPR Policy and such other government policies relating to government-funded research projects such as but not limited to RA 10055, all of which are deemed incorporated into this Agreement. Government personnel involved in the project shall further be subject to such policies, rules and regulations governing copyrightable and patentable works produced by government personnel.

Recognition of principal author/institutions. All major reports or articles including tri-media presentations using project data and output shall recognize the principal researchers and authors involved in the project as well as acknowledge KU and PSU as the source of research funding support.

This agreement shall take effect upon signing hereof by the parties and shall remain in force and effect unless revoked or when the terms and conditions herein stipulated are amended in writing upon mutual consent of the parties.

IN WITNESS WHEREOF, the parties have hereto affixed their signature this ___ day of ___, 2018 at _____.

ECONOMIC VALUATION OF PROTECTING ATULAYAN MARINE PROTECTED AREA (MPA) USING FISHERMEN'S WILLINGNES TO WORK RESEARCH PROJECT

Rationale

Coastal resources nowadays are subjected to increasing pressure to its ecosystem's carrying capacity. Externalities from these developments could threaten biodiversity, natural resources integrity, coastal ecosystem and beachscape beauty.

The challenge therefore lies in striking a balance between population growth, economic development and protecting the environment and biodiversity.

The establishment of marine fisheries reserve/sanctuary (MFR-S) or marine protected area (MPA) is one of the effective means to protect these resources. But financial considerations are among the usual constraints challenging its sustainability. MFRS has the ecotourism potential which can be tapped to support financial operations of the protected area that will enhance the conservation of biodiversity and aesthetic beauty as well as provide the opportunity to generate economic benefits from ecotourism for local communities, while establishing frameworks for participatory ecotourism and resource governance.

Rosales (2003) in her paper stressed that, "one of the weaknesses identified in the management of these coastal resources is the lack of proper economic valuation of which if corrected could encourage more investment and better management and conservation. Comprehensive economic valuation calls for the identification of the uses of the resource, and attaching monetary values to each use. Recreation has been identified as one of the more important, yet highly undervalued, uses of beaches, particularly those located in protected areas (PAs).

The valuation study on MFR-S will impute price to the conservation and protection of these ecosystem to provide incentive towards its proper use, prevent resource degradation and maximize resource rent. The development of an environmental payment scheme will not only institutionalize stakeholdership but also ensure the people's organization managing it continuous financing management interventions that will promote ecological balance and economic security of people dependent on the resources.

The insights and data generated from this type of study will also be of great help to the academe and international scholars and researchers and policy makers in understanding resource utilization patterns in coastal resources in the context of sustainable development as inputs for designing counter measures to mitigate their negative impacts to society and their economy.

Objectives

This study aims to estimate the value of protecting Atulayan Island MFR-S as determined from the willingness to work and pay of Sagñay fishermen.

Specifically it aims to generate the following data:

1. Determine the level of awareness of Sagñay, Camarines Sur fishermen for Atulayan Island MFR-S
2. Determine the perceptions of Sagñay, Camarines Sur fishermen for Atulayan Island

MFR-S

3. Estimate the willingness of Sagñay, Camarines Sur fishermen to pay for its conservation and protection
4. Estimate the willingness of Sagñay, Camarines Sur fishermen to work for its conservation and protection
5. Estimate the economic value imputed by Sagñay, Camarines Sur fishermen for Atulayan Island MFR-S conservation

Methodology

The study will use both the Contingent Valuation Method.

A questionnaire will be developed to capture the willingness to contribute for the protection of the MFR-S by the Sagñay fishermen as respondents. The respondents' willingness to contribute for protection will be used as surrogate price for MFR-S resources. Hypothetical scenario of Atulayan Island MFR-S ecosystem services attributes will be used to elicit economic imputation from the respondents for these non-marketed goods.

Sample barangays will be determined from the total barangays in Sagñay, Camarines Sur. Randomized sampling of fishermen will be done from the list of fishermen's names in the selected sample barangays.

The data will be analyzed using valuation econometric models

Expected Outputs

The following will be the expected outputs of the study:

1. Level of awareness and perception of Sagñay fishermen for the Atulayan MFR-S as marine protected area
2. Information on the willingness to pay and work for the conservation of Sagñay, Camarines Sur fishermen or Atulayan Island MFRS
3. Estimated economic cost of conserving Atulayan Island MFR-S
4. Insights on the potential of environmental services payment scheme as sustainable source for funding coastal resource conservation and protection

Date of Implementation

August 2018 to August 2019

Estimated Budgetary Requirements

Item	Kochi University	Partido State University	Research Project
MAINTENANCE AND OPERATING EXPENSES			
Traveling Expenses		20,000.00	20,000.00
Communication Expenses (postage and deliveries, phone and cellular phone expenses, internet expenses)		2,000.00	2,000.00
Supplies and Materials (office supplies)		20,000.00	20,000.00
Representation Expenses Snacks for respondents @ PhP 25 x 815 respondents		17,350.00	17,350.00
Other expenses			
Cost of Survey @ PhP 150 per questionnaire x 815 questionnaires	61,125.00	61,125.00	122,250.00
Cost of posters 8 pcs posters		2,400.00	2,400.00
Sub-Total	61,125.00	122,875.00	184,000.00
GRAND TOTAL			**184,000.00**
