AACCUP TECHNICAL REVIEW *and* RECOMMENDED BOARD ACTION

SUC: Partido State University

Address: Goa, Camarines Sur Region: V

College/Dept.:

Program: Bachelor of Science in Information Technology

Type of Visit: 4th Survey – Revisit all areas

Components/Majors:

AGENCY OF CHARTERED COLLEGES AND UNIVERSITIES IN THE PHILIPPINES
AACCUP
RELEASED
11.26.25
CJHAY ABAGAT
Records Management Asst., AACCUP
1987

Date of Survey: October 11-13, 2023; August 13-15, 2025

SUMMARY OF RATINGS:

Areas	Ratings *1=Poor, 2=Fair, 3=Satisfactory, 4=Very Satisfactory, 5=Excellent*
1. Research	5.00
2. Performance of Graduates	4.50
3. Community Service	5.00
4. International Linkages and Consortia	4.00
5. Planning Process	4.33
Grand Mean	**4.57**

CRITERIA TO PASS THIS LEVEL:

		Mean Rating	Please Check		
1.	Qualified in the Level IV		Yes	No	NA
	- Minimum Grand Mean	4.50 or higher	☑		
	- Minimum Area Mean	4.00 or higher	☑		
2.	Mandatory Recommendations				
	- Complied with all Recommendations to be complied with before award of Level IV		☑		

RECOMMENDED BOARD ACTION:

Type of Award	Remarks	Effectivity or Date of Duration
☑ Level IV Re-accredited	must comply with mandatory recommendations	August 16, 2025 – August 15, 2030
	subject to another revisit in the area/s of: 1. _____ 2. _____ 3. _____	

PARTIDO STATE UNIVERSITY

ACCREDITORS:

Name:	Prof. Nancy M. Santiago
Academic Rank:	Associate Professor IV
Field of Specialization:	Computer Engineering, Information Technology, Computer Science
Highest Educational Attainment:	Master in Engineering Program
Institution and Address:	Bulacan State University, City of Malolos, Bulacan

Name:	Prof. Julius A. Sareno
Academic Rank:	Associate Professor V
Field of Specialization:	Information Technology
Highest Educational Attainment:	Master in Information Technology
Institution and Address:	Technological University of the Philippines, Ayala Boulevard, Ermita, Manila

RECOMMENDATIONS TO THE INSTITUTION:

MANDATORY (to be complied with before the award)	**ENHANCEMENT** (may be complied with after the award)
	1. The department may develop a structured and supportive system to actively encourage faculty participation in research activities. A focused effort should be made to ensure faculty members are provided with opportunities to develop their research skills, access research funding, and engage in both individual and collaborative research projects. This system should be designed to facilitate faculty members' professional growth and contribute to the overall academic development of the program. 2. The department may establish a comprehensive strategy for the registration, protection, and commercialization of research outputs such as patents, copyrights, and utility models. This strategy should not only focus on ensuring that the intellectual property of faculty and students is protected but also on encouraging the transformation of research findings into marketable technologies, products, or services. Establishing a formalized process for commercialization will help bridge the gap between academic research and practical industry applications. A collaborative environment between the academic and industry sectors should be developed to foster the commercialization of innovative solutions and technological advancements. 3. The department may prioritize the strengthening of industry-academic linkages to ensure that the research conducted within the program aligns with current technological advancements and industry needs. Collaborations with local and international industry partners can help identify pressing challenges within the field of IT and technology, providing real-world applications for academic research. Research projects should be tailored to address the specific needs of industries, enhancing

PARTIDO STATE UNIVERSITY
CONTROLLED

	the relevance of the program's research output and its application in solving contemporary technological issues. Establishing formal industry-academic partnerships will enable the program to stay at the forefront of emerging trends and foster the application of research in practical, professional settings. 4. The department may establish a structured process for the regular review and analysis of the achievement of Program Educational Objectives (PEOs) and Program Outcomes (POs). This review should involve gathering feedback from multiple stakeholders, including alumni, industry partners, and current students, to assess how well the program's outcomes are being met. The results of these reviews should inform curriculum adjustments, ensuring that the program continues to meet both the academic and professional needs of its graduates. Additionally, the analysis should focus on the alignment between the program's goals and the actual job placement and performance of graduates in the IT industry, ensuring that the program adequately prepares students for their intended careers. 5. The department may conduct regular evaluations of graduate productivity and job alignment to assess how well BSIT graduates are meeting industry expectations. This evaluation should involve tracking alumni employment outcomes, such as the job roles they occupy, their career advancement, and their alignment with the skills and competencies expected of BSIT graduates. Data should be collected through alumni surveys, employer feedback, and industry reports. The findings from this evaluation should be used to enhance the curriculum and ensure that the program equips students with the necessary knowledge and skills to succeed in their careers, ultimately strengthening the program's relevance and effectiveness. 6. The department may strengthen its community engagement and extension programs by developing initiatives that align with the needs of local communities and industries. These programs should focus on providing practical, technology-driven solutions to real-world problems faced by the community, with a particular emphasis on IT-related services. The department may collaborate with local government units, businesses, and non-governmental organizations to create sustainable extension programs that offer long-term benefits to the community, while also providing students with opportunities for applied learning and social responsibility. 7. The department may involve alumni and industry partners more actively in the design and execution of extension programs. By leveraging the expertise of alumni and industry professionals, the department can ensure that the extension activities are relevant to current technological trends and

CONTROLLED

	address community needs. This collaboration can include mentoring, training, and offering industry-based solutions that improve community infrastructure or provide skill development in emerging technologies. Strengthening these partnerships will also enhance the department's network, ensuring that its extension programs are well-supported and impactful. 8. The department may implement a systematic process for evaluating the impact and effectiveness of its extension programs. This evaluation should involve measuring both the immediate outcomes and long-term benefits of the programs, including the improvement of community members' IT skills, increased employability, and contributions to local development. Feedback from participants, community stakeholders, and faculty members should be gathered to assess program success. Based on the evaluation, the department can refine its approach to ensure that the extension programs continue to meet the needs of the community and provide valuable learning experiences for both students and faculty. 9. The department may strengthen its existing international linkages and actively seek new collaborations with reputable institutions and organizations worldwide. These partnerships should focus on promoting faculty and student exchanges, collaborative research, and joint academic programs. The department should seek opportunities for international exposure for both students and faculty to enhance the global perspective of the program and provide a platform for cross-cultural learning and knowledge exchange. Developing these connections will enrich the educational experience and expand the program's international network. 10. The department may implement a systematic process to monitor and evaluate the effectiveness of its international linkages. This evaluation should assess the outcomes of student exchanges, collaborative research, and faculty involvement in international activities. Feedback from international partners, alumni who have participated in these programs, and faculty involved in collaborative projects should be gathered regularly. The findings from these evaluations should be used to strengthen and adjust international linkages, ensuring they meet the evolving needs of the department and provide continued value to the students and faculty involved. 11. The department may establish a structured and comprehensive planning framework that involves all key stakeholders, including faculty, staff, students, and industry partners. This framework should ensure that long-term goals and short-term objectives are clearly defined, aligning the program's development with industry trends, technological advancements, and academic

PARTIDO STATE UNIVERSITY
CONTROLLED

	standards. Regular planning sessions and reviews should be scheduled to assess progress, identify emerging challenges, and adjust plans accordingly. A clear timeline with specific milestones for each goal will help monitor the implementation of the program's strategic vision. 12. The department may adopt a data-driven approach in its planning process by systematically collecting, analyzing, and utilizing relevant data to inform decision-making. This data may include student performance metrics, industry trends, alumni feedback, and research outcomes. By integrating these data points into the planning process, the department can make informed decisions regarding curriculum updates, resource allocation, and faculty development. Regular surveys and industry consultations can also provide valuable insights to ensure that planning efforts align with current and future demands in the field of IT. 13. The department may implement a system for continuous monitoring and feedback to assess the effectiveness of its planning efforts. This system should involve regular evaluations of the program's goals, objectives, and outcomes to determine whether the planning process is achieving the desired results. Feedback from students, faculty, alumni, and industry partners should be collected periodically to gauge satisfaction and identify areas for improvement. Based on this feedback, the planning process should be adjusted to ensure the program remains responsive to the needs of the stakeholders and aligned with the evolving demands of the IT industry.
